

## Timon Rudder

This competitively priced and well-known flap-type rudder has a slide-bar flap linkage. It is the perfect solution if you require excellent manoeuvrability.

Thanks to the flap-type principle, the Timon rudder has a high maximum lift that results in a first class manoeuvring performance. The simple slide-bar flap linkage is easy to maintain and construct, so this manoeuvrability comes at a competitive price. The slim profile design ensures that the drag is low.

A quick service device on the flap linkage means you never have to be concerned with lengthy down times.

### **BENEFITS** ▶

- Slim profile
- Easy maintenance
- Excellent manoeuvring performance
- Competitive price
- Designed for quick serviceability

## CHOOSE TO INTEGRATE

*Van der Velden® Marine Systems is a single source supplier and can deliver complete manoeuvring packages, including rudders, rudder trunks, streamline bodies, steering gear and steering gear foundations.*

*Customers and yards alike benefit from an easy to install and integrated solution, a unified overall design and one project coordinator for the manoeuvring system.*

*The Van der Velden® Marine Systems portfolio also includes passerelles, specially designed marine cranes, side boarding ladders and bowthrusters. The company is a major supplier of hydraulic components.*

# SMART MARITIME SOLUTIONS

## APPLICATIONS ►

- Especially suitable for yachts up to about 50 metres, offshore supply vessels, anchor-handling tugs, smaller ferries, commercial vessels and fishing vessels.

The Timon rudder is also available in an asymmetric profile version. Its twisted leading edge provides added benefits in terms of propulsion, while further decreasing the risk of cavitation on high-speed vessels.
